

AMENDMENTS TO THE SPECIFICATION:

Please replace the following numbered paragraphs with the following rewritten paragraphs:

[31] Referring to Figure 11, another lock ~~housing 12~~ engages ~~assembly 10~~ may be provided by the core assembly 14. That is, the core assembly 14 is universal and, in addition to the deadbolt housing discussed above, is engageable with a spindle assembly 60 for a lever and knob ~~rather than using the torque blade 38 of the Figure 1 embodiment typical of the deadbolt~~. The core assembly 14 is typically mounted within a lever or knob L1 on one side of a door D (illustrated schematically) and the spindle assembly 60 passes through ~~a~~ the door D to mount a knob or lever L2, which are conventional and need not be described in greater detail herein. ~~The spindle assembly 60 is generally cylindrical and preferably includes a female portion 62, which engages the plug 32 of the core assembly 14 (Figure 11) and a rod portion 64, which mounts to the knob or lever L2 opposite the core assembly 14 (Figure 11). The spindle assembly 60 is illustrated from the core assembly 14 side in Figure 12.~~

[32] ~~Referring to Figure 12, the spindle assembly 60 is illustrated from the core assembly 14 side in Figure 12. The spindle assembly 60 is generally cylindrical and preferably includes a female portion 62, which engages the plug 32 of the core assembly 14 (Figure 11) and a rod portion 64, which mounts to the knob or lever L2 opposite the core assembly 14 (Figure 11).~~

[34] In an assembled position of this embodiment, the female portion 62 is mounted over the first engagement member 44. The cams 66 which define a smaller diameter within the female portion extend within an outer diameter defined by the first engagement member 44. That is, the rectangular shaped member 48 is rotated into contact with cams 66 of the female portion 62. Rotation of the plug 32 within the barrel 30 rotates the first engagement member 44 into contact with the cams 66 to rotate the spindle assembly 60

(Figure 13). A single plug 32 may thereby be utilized for both the torque blade 38 and the spindle assembly 60.
